EDUCATION

StonyBrook University

Bachelor in Computer Engineering (GPA: 3.5/4)

StonyBrook, NY

Aug. 2023 – May 2024

Hunter College

Bachelor in Computer Science

Manhattan, NY

Aug. 2024 – May 2027

EXPERIENCE

Teacher Assistant for Science and Technology Entry Program

StonyBrook University

March 2024 – May 2024

StonyBrook, NY

- Introduce the basics of Python and web development programming, including CSS, HTML, and JavaScript.
- Assist students in learning to develop their own games using basic Python functions and libraries.
- Guide students in learning about programming for various purposes and potential career paths.

Pathway: Technical Interview Prep Program

CodePath

May 2024 – June 2024

San Francisco, CA · Hybrid

- Learn about general technical solving process: Understand, Match, Plan, Implement, Review, and Evaluate.
- Practice implementing and solving classic algorithms such as sorting, searching, traversal, and hashmaps.
- Learn about common patterns encountered during coding interviews.

Participant, Google (G-SWEP) Fellowship via Basta

Basta Fellowship

Oct 2024 – present

111 8th Ave, NY 10011 · Hybrid

- Successfully passed the CodeSignal online assessment with a score of 396, demonstrating intermediate coding proficiency.
- Selected to pair program with a Google Software Engineer for 10 weeks to receive mentorship to prepare for technical and behavioral interviews.

PROJECTS

Academic Calculator | *Vue, HTML, CSS, Javascript*

May 2024 – June 2024

- Designed a web page using Vue with my friend for Stony Brook University to track current and projected GPAs.
- I have designed the future-section calculator using CSS and HTML, incorporating grid and table layouts.
- I have implemented functions to calculate grades, credits, transfer credits, and total earned credits using JavaScript.

Little Chatbot | *Python, React, Flask, HTML, CSS, Javascript*

May 2024 – Present

- Developing a basic chatbot using the Python ChatterBot library and intending to create a single-page application displaying the bot's response.
- Implementing basic machine learning algorithms and ideas to train my bot and connect to relevant databases.
- Intending to establish a link or communication between my application's user interface and server-side.

Virtual Ant (Course Project) | *C programming language*

April 2024 – May 2024

- Implemented the DFS algorithm to solve any given text mazes in a string and allow the program to read any given file.
- Implemented basic maze-solving functions such as move, jump, and check, in addition to stack memory functions that keep track of the steps taken to solve the maze.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript, HTML/CSS

Frameworks: Vue Framework, Flask

Developer Tools: Git, VS Code, Visual Studio, IntelliJ.
